Proficient with styling preprocessors such as Sass/SCSS & LESS.

Proficient in modern PHP development practices, testing and Continuous Integration. Increasing experience with Node.JS, React, Redux and Go.

Skilled in relational database design, optimisation and performance. Working knowledge of NoSQL database systems and Elasticsearch.

Projects

Project IronHide - Lead Developer

Standardised framework for the Traveljunction network. Consisted of a Node-powered front to the API to provide a simplified means of access for front-end developers. Driven by the partnership with a major UK high street brand name.

TowerBlock Platform/Framework - Primary Developer

Website platform & development framework powering assorted lead-generating and content-driven websites in Clicksco's network. Major contributor to a 75% reduction in team turnaround times.

Lead Management System - Lead Developer (<https://lms.clicksco.com/>)

Manages leads generated from the Financial Services network of sites. Laravel-powered API and queue processor built on a LEMP stack with an AngularJS front-end.

Experience

Contract Web Developer, Increment By One Ltd - March 2016 to Present

- **Front End Developer - Department for Work & Pensions - August 2016 to Present**
Supported a Java team of developers with Freemarker templates adhering to strict government guidelines on accessibility and progressive-enhancement. Transitioned with the team from private beta to full public release.
- **Consultant Developer - Layers Ltd. - March to August 2016**
Provided technical architecture support to a design agency building a large application for

Northern Gas Networks. Responsible for system architecture, technical requirements and an initial release comprising a Laravel Lumen RESTful API and a ReactJS application.

Senior Front End Developer, Bytemark - September 2015 to March 2016

Remote worker in support of the development & sysops teams. Focussed on front-end support of a Ruby team, development & mentorship. Beat out more experienced Ruby developers learning what I needed of Ruby during a time-restricted technical interview.

- Leading team on the refresh of the primary website. I am using the opportunity to drive the development of company-wide UI Kit.
- Contributed to Golang DHCP project, experience with Go Templates
- Supporting Ruby developers with general front-end code & AngularJS

Lead Developer, Financial Services at Clicksco UK, Lead Front End Developer, TravelJunction.com - August 2013 to September 2015

UK lead of a distributed team spanning the USA, UK, UAE & New Zealand, working in support of the company's Financial Services division. From July 2015, I transferred internally to TravelJunction to lead a team building our network of travel sites.

- Lead developer and architect of the Lead Management System
- Conceived & implemented the TowerBlock platform to introduce large efficiency savings in our core workflow
- Lead the build of a travel website for a major UK brand name
- Steered the attitude of the division to one of delivering modernised, stable but adaptable applications.
- Company development handbook contributor for PHP & Front End technologies

Head of Digital at Surreal Creative - November 2011 to August 2013

I was hired to establish a digital department for a branding and marketing agency with large, international clients.

- Laid the groundwork for standard working practices
- Managed remote provider (UTC -3) before hiring internal team
- Mentored team, managed their work & personal development
- Scoped projects, met with clients & advised on digital strategy

CTO & CWO at Happiest Limited - July 2010 to November 2011

Social media startup, creating a social network for the tracking of happiness habits across people and businesses. I joined the project early to architect the initial system design and helped to build the alpha and beta versions.

Assorted Web Developer roles - November 2004 to July 2010
